## The New Reality of the Supply Chain

### Today, more than ever, procurement and supply chain teams face acute longterm challenges:

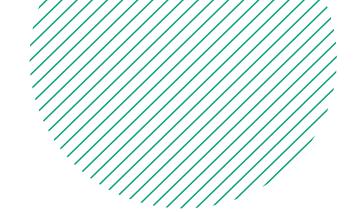

- Geopolitical fragmentation driven by ongoing conflicts, shifting alliances, and trade barriers
- Pressure to engage and retain talent amid hybrid work, automation, and upskilling needs
- Relentless cost pressures intensified by inflation, nearshoring, and operational inefficiencies
- Innovation pressure to integrate AI, data analytics, and automation fast
- Increasing governance complexity with expanding regulations on ESG, trade, and cybersecurity

### These challenges are compounded by everyday supply chain realities:

- Declining morale as teams face constant disruption and escalating expectations
- · Unexpected shocks, from cyberattacks to climate-driven events, demanding rapid resilience
- Ongoing shortages of critical materials and components
- Margin pressure from rising costs and supplier instability

It's no surprise procurement and supply chain professionals are under immense strain. With the changing demands of their roles, teams must be regularly trained and developed simply to be equipped to do their job effectively.

# Continuous, Personalized, Digital Learning

The only way to effectively assess and upskill teams at scale is through continuous, personalized, digital learning. Thanks to our unique blend of training courses, market-leading platform, and learning science your procurement, supply chain and trade compliance teams will be equipped with the skills they need to excel in their roles.

### Why Skill Dynamics?

520+

Multinational clients

320,000+

Learners around the world

100

Countries

#### The Results

Our eLearning will accelerate your performance by helping you to:

- Attract and retain talent
- Future-proof your capabilities and strengthen the impact of your L&D investment.

## Our Complete Learning Library

With over 2000 pieces of supply chain, procurement and trade compliance content across multiple dynamic and engaging learning formats, we're confident we have the broadest and deepest digital learning catalog in the industry.

### Interactive Formats That Make Learning Memorable

There are various formats of content that have been designed based on learning science, ensuring knowledge is retained and applied on-the-job.

High impact eLearning

High-impact e-learning	Practical, scenario-based learning ranging from 10 to 40 minutes. Unique to the market as our e-learning uses cognitive load theory to maximize retention and works to make complex High-impact e-learning concepts accessible.
Expert review	An expert presents a scenario with a problem to be solved. Learner types out solution and compares with expert response.
Microlearning	Short videos where an expert summarizes and refreshes key concepts learned previously.
Skill builder	Test the learner's understanding by putting the learner in real-life scenarios and posing a set of questions.
Refresher courses	Summaries of eLearning courses taken previously – battles the forgetting curve.
Exams/assessments	Exams/assessments for each competence designed to measure the learner's skill level in that competence.
Memory jogger	Summary of eLearning courses in PDF format.
Application-based tasks and activities	'On the job' projects that ask the learner to implement what they have learned. Activities are shorter versions of this, such as speaking to a colleague or a simple task.
Ask the expert	An interactive modality resembling an FAQ, offering learners supplementary insights and detailed explanations on topics covered within the course.

Learn how to use statistical analysis, big data analytics, machine learning and the Internet of Things to create supply chain value, increase operational efficiency, generate more revenue and reduce costs.

Topic	Level	Minutes	Description	Course	Skill Builder	Microlearning	Memory Jogger	Workplace Assessment	Exam
The Internet of Things	••••	85	Gain the knowledge and skills necessary to navigate the new era of supply chain management. Through an exploration of IoT technologies and their applications in the supply chain domain, you will gain a deep understanding of the potential benefits of these technologies and how they can be leveraged to optimize supply chain operations.	$\otimes$			<b>⊘</b>		
Learning from Amazon – Proven Strategies and Tips	••••	45	Get acquainted with the management philosophy, supply chain best practices and the strategic use of technology that has made Amazon a global leader in omni-channel retail. You will gain insights into how Amazon uses technology and supply chain excellence to create a great customer experience, and how you can implement these practices in your organization to gain market leadership.	$\otimes$			$\otimes$		
How to Access & Analyze Big Data for Actionable Insights	•••	45	Discover the objectives of big data analytics and understand how to separate useful data from noise, how to prepare data for analysis, and how to store data.	$\otimes$			$\bigcirc$		
Data Preparation: An Essential Guide	•••	45	Deep dive into the process of converting data into wisdom. Learn how to use various sampling techniques and in which situations each technique should be used, including how to segment data, filter data, and the key parts of a data security program.	$\otimes$			$\odot$		
From Information to Knowledge, Descriptive Analytics	• • • 0	55	Learn how to turn data into information your organization can use to make better decisions. Discover analytics tools used in business analysis, statistics for descriptive analytics, and how to use probability distributions.	$\otimes$	$\otimes$		$\otimes$		
From Information to Knowledge, Diagnostic Analytics	••••	45	Learn how to use diagnostic analytics to get to the root cause of problems, including the use of correlation to diagnose the cause of organizational results and test your hypotheses using various hypothesis-testing techniques.	$\otimes$			$\otimes$

Торіс	Level	Minutes	Description	Course	Skill Builder	Microlearning	Memory Jogger	Workplace Assessment	Exam
Introduction to Predictive Analytics	•••	60	Learn how to use regression analysis, including how to establish the significance of the relationship between variables through the calculation of a correlation coefficient. Gain an understanding of hypothesis testing and how to use statistical forecasting techniques including naïve forecasting, moving average, weighted moving average and exponential smoothing to predict future demand.	⊗			<b>⊘</b>		
Predictive Analytics: Data Mining & Machine Learning	•••	30	Explore the types of machine learning, including clustering algorithms and other machine algorithms. Learn about hierarchical clustering, K-means, and where data mining and machine learning fit into the process of turning data into wisdom. Gain an understanding of supervised and unsupervised learning.	⊗					
Introduction to Prescriptive Analytics and Scenario Analysis	•••	45	Deep dive into Scenario Analysis to help improve your decision making.	$\odot$			$\bigcirc$		
Introduction to Supply Chain Control Towers	••••	45	Discover what a supply chain control tower is, including its principles and benefits.	$\odot$			$\bigcirc$		
Smart Supply Chains: The Internet of Things	••••	45	This topic will equip you with the knowledge necessary to navigate the new era of supply chain and logistics. Through an exploration of IoT technologies and their applications, you will gain a deep understanding of the potential benefits of these technologies and how they can be leveraged to optimize operations.	$\otimes$	$\otimes$	$\otimes$	$\Diamond$	$\otimes$	
Big Data and Business Analytics	••••	45	Unlock the power of data in driving informed business decisions with our comprehensive course on Big Data and Business Analytics. In this course, you will delve into the world of big data analytics, exploring cutting-edge techniques, tools, and methodologies that empower organizations to transform raw data into actionable insights.	$\otimes$	$\otimes$	$\odot$	$\Diamond$	$\otimes$

Topic	Level	Minutes	Description	Course	Skill Builder	Microlearning	Memory Jogger	Workplace Assessment	Exam
Supply Chain Control Towers	••••	65	Gain the knowledge and skills needed to navigate the complexities of supply chain control towers. Whether you are a supply chain manager, logistics professional, or a decision-maker within your organization, this topic will empower you to make informed choices that enhance your supply chain's efficiency, resilience, and overall performance.	$\otimes$	$\otimes$	$\otimes$	$\otimes$	$\otimes$	
Generative Al in Supply Chain Management	••••	45	This course explores the transformative impact of Generative AI in Supply Chain Management. By course end, you'll be equipped to integrate AI effectively, drive efficiency, and navigate the future of supply chains.	$\otimes$	$\otimes$		$\otimes$	$\bigcirc$	
Al for Supply Chain Optimization	•••	55	This course delves into the symbiosis of artificial intelligence (AI) and supply chain management (SCM). By the course's end, you'll be equipped to navigate the complexities of modern SCM, leveraging AI to drive efficiency, resilience, and innovation.	$\otimes$	$\otimes$		$\otimes$	$\bigcirc$	
Empowering Al-driven Transformations in Supply Chains	•••	55	This course delves into the practical implementation of artificial intelligence (AI) within supply chain management. Covering a wide spectrum of topics, it equips participants with actionable insights and strategies to enhance supply chain efficiency and resilience. By the course's end, participants will be equipped to implement AI solutions effectively, driving innovation and agility in supply chain operations.	$\otimes$	$\otimes$		$\otimes$	$\otimes$	
Supply Chain Security	•••	55	This course will guide you through the essentials of securing your supply chain	$\otimes$	$\otimes$		$\otimes$	$\bigcirc$	
Al-Driven Digital Twins for Resilient and Efficient Supply Chains	••••	55	This course explores how Al-powered digital twins can transform supply chain management by providing real-time insights, predictive capabilities, and optimization.	$\otimes$	$\otimes$		$\otimes$	$\bigcirc$

Торіс	Level	Minutes	Description	Course	Skill Builder	Microlearning	Memory Jogger	Workplace Assessment	Ехаш
Demand Forecasting - A Comprehensive Introduction to Methods and Strategies	••••	85	Learn about the key considerations of making a forecast, including the different types of forecasting methods - both quantitative and qualitative. Learn how to make decisions to ensure your forecasts have the most impact. Gain an understanding of how different departments use forecasts to best meet the organization's needs.	$\otimes$	⊗		$\otimes$		$\otimes$
Quantitative Forecasting Methods	••••	325	Learn how to accurately forecast by using trends, cyclicality and seasonality, including how to separate patterns from noise and use quantitative forecasting methods such as the naïve, average, moving average, weighted moving average, and exponential smoothing.	$\otimes$	$\otimes$		$\otimes$	$\otimes$	$\odot$
Qualitative Forecasting Methods	••••	325	Learn how to use the inside information from experts, executives, and customers to make your forecasts more complete, including how to use qualitative forecasting methods such as the Jury of Executive Opinion, Delphi, and Salesforce composite. Gain an understanding of when to use customer surveys and test marketing to enhance forecasts. Gain insight into when personal incentives can bias forecasts and how to correct them.	$\otimes$	$\otimes$		$\otimes$	$\otimes$	$\otimes$
Measuring Forecast Accuracy	••••	75	Learn how to determine the size and source of your errors through Mean Absolute Percentage Error and Forecast Bias. Discover which forecasts to measure - that is over, what time horizon, how often and at which level to measure as well as potential causes of forecast error and how to correct them.	$\otimes$			$\otimes$		$\odot$
Improving Forecast Model Accuracy	••••	95	Discover how to improve your forecasting model by keeping it updated, using the right data and separating products with different patterns.	$\otimes$	$\otimes$		$\otimes$		$\bigcirc$
Improving the Forecasting Process	••••	85	Learn how to shape demand by reducing your dependence on forecasting, including how to influence organizational practices that may be the root cause of forecast inaccuracy. In addition, you will learn how to diagnose and solve problems in the process of demand forecasting. You will also learn how to use Big Data and the Internet of Things to improve forecasting accuracy.	$\otimes$	$\otimes$		$\otimes$		$\otimes$

Topic	Level	Minutes	Description	Course	Skill Builder	Microlearning	Memory Jogger	Workplace Assessment	Exam
Advanced Time Series Methods: An In-Depth Overview	•••	85	Go beyond the single-factor exponential smoothing method to account for trends, seasonality and cyclicality further into the future. Explore advanced methods such as Holt's 2-factor method, and the Holt-Winters method in a simple, clear way, including how to use damped trends to ensure your forecasts stay accurate for longer. Full mathematical calculations and complete example calculations are provided in downloads within the topic, providing you with everything you need to apply these methods.	$\otimes$	$\otimes$		$\odot$		$\odot$
Visualizing Data with Simple Linear Regression	••••	85	Learn how to improve the accuracy of forecasts by identifying factors such as advertising and calculating the impact they have on demand. Discover how to use simple linear regression to visualize and understand the relationship between supply chain data points.	$\otimes$	$\otimes$		$\bigcirc$		$\bigcirc$
Multiple Regression Analysis	•••	75	Discover how to further improve the accuracy of forecasting by accounting for many different causal factors, such as advertising, discounts, and the state of the economy. Learn how to test how good your forecasting model is.	$\otimes$			$\odot$		$\otimes$
Forecasting for New Products	•••	75	Learn about the different types of new products and how technology and market type drive the approach to get better forecasts. The techniques available include: Item Suppression, Analogous Forecasting, Assumption Based Modeling, Diffusion Models and scenario analysis techniques such as Monte Carlo Simulations. Explore how to combine several of these methods to give the best chance of success.	⊗	$\otimes$		$\otimes$		<b>⊘</b>
Demand & Supply Planning Metrics	•••	75	Learn strategies for improving the Agility and Asset Management Efficiency of a supply chain by understanding demand patterns, forecasting needs accurately, technology solutions and streamlining processes.	$\otimes$			$\otimes$		<b>⊘</b>

Topic	Level	Minutes	Description	Course	Skill Builder	Microlearning	Memory Jogger	Ask The Expert	Workplace Assessment	Exam
Introduction to Inventory Control	• 0 0 0	45	Learn about the types of inventory, the purpose of holding inventory, inventory control policies and inventory control methods. Gain an understanding of the importance of inventory control and how to establish a successful inventory control system.	$\otimes$			$\bigcirc$			
Inventory Control for Finished Goods: A Comprehensive Guide	••••	45	Learn how the Order Point Method and Periodic review method work, including how to determine how much inventory to keep, when to order, and how much to order. Discover how to determine the right amount of safety stock and learn concrete actions for being able to reduce it. Learn to measure your inventory control by calculating inventory turns, and how to establish a target.	$\otimes$			$\odot$			
Inventory Control for Components	•••	55	Learn how MRP and Just In Time (JIT) are used to control component inventory, including how MRP works and MRP inputs that include the Master Production Schedule (MPS), Bill of Materials (BOM), inventory records, and lead times. Learn how Just In Time (JIT) uses actual production to determine when and how many components to order and the fundamentals of a Kanban system.		$\otimes$		$\odot$			
Inventory Classification Fundamentals	•••	45	Learn the various methods for classifying inventory. Go into greater depth with ABC analysis and then go further using the inventory risk matrix to determine which inventory control strategy is most appropriate for each item. Learn when to build up seasonal stock, and when to hold strategic stock as part of your inventory control strategies.	⊗			<b>⊘</b>			
Physical Inventory Control	••••	45	Explore how errors in inventory records typically occur and how to prevent and mitigate them. Learn how to conduct a physical inventory audit, all the way through to finding and correcting the root cause of inventory errors. Gain an understanding of the importance of accurate inventory records and how to implement a cycle counting program, including determining priorities.				$\odot$

Topic	Level	Minutes	Description	Course	Skill Builder	Microlearning	Memory Jogger	Workplace Assessment	Exam
Six Sigma: Understanding Quality and Failure Modes Effects Analysis (FMEA)	••••	105	Explore the foundations of Six Sigma and concepts such as understanding quality and the Taguchi loss function. Deep dive into Failure Mode and Effects Analysis (FMEA) and learn how potential failure modes within a system can be identified, analyzed and addressed. Discover best practices for implementing FMEA, including process analysis and criticality assessment.	$\otimes$			$\otimes$	$\otimes$	
Six Sigma: Overview of the DMAIC process	••••	115	Explore the fundamentals of Six Sigma and the DMAIC (Define, Measure, Analyze, Improve, and Control) methodology. Learn how to effectively define a problem by using different Six Sigma tools and processes. Discover how to use these tools in order to measure progress during your project. Learn how to apply principles in order to complete a successful Six Sigma project.	<b>⊘</b>		$\otimes$	<b>⊘</b>	<b>⊘</b>	
Six Sigma: Understanding the Measure Phase of DMAIC	•••	45	Explore measurement tools such as data collection and analysis, statistical process control and identifying process capability. Learn how to apply these tools to measure current performance levels and identify areas for improvement, as well as strategies for measuring and monitoring improvement efforts over time. Learn how data from this stage can inform decisions made during the subsequent Analyze, Improve, Control phases of DMAIC.	$\otimes$			$\odot$		
Six Sigma: Applying the DMAIC Methodology Using Analyze, Improve, and Control Phases	•••	45	Learn how to apply the DMAIC methodology of Define, Measure, Analyze, Improve, and Control (DMAIC) in a Six Sigma project, including how to assess processes and identify areas for improvement. Discover how to use the "Analyze", "Improve" and "Control" phases of the DMAIC process to ensure improvements are measurable and sustainable over time.	$\otimes$			⊗		
Six Sigma: Measurement system analysis (MSA) / Gage R&R	•••	105	Deep dive into Measurement System Analysis (MSA) and Gage Repeatability & Reproducibility (Gage R&R). Develop an understanding of the procedures used in MSA/Gage R&R and how they are applied in the Six Sigma DMAIC process.	$\otimes$			$\otimes$	$\bigcirc$

Торіс	Level	Minutes	Description	Course	Skill Builder	Microlearning	Memory Jogger	Workplace Assessment	Exam
Six Sigma: Statistical Process Control (SPC)	•••	105	Learn how to use statistical methods for monitoring and controlling processes. Explore probability distribution simulations, process capability analysis and create control charts from scratch. Discover how to identify areas in your organization where controls can improve quality and reduce costs.	$\otimes$			$\Diamond$	$\otimes$	$\bigcirc$
Six Sigma: Design of Experiments (DOE)	•••	105	Explore the conceptual, analytical and practical aspects of designing experiments. In addition, learn about the failings of traditional experimental design and the benefits of designing a Full Factorial experiment which if done correctly gives the maximum knowledge gain for the lowest cost, every time. Also, learn how to use the results of your designed experiment to create a predictive model and all without the complicated statistics.	$\otimes$			$\odot$	$\otimes$	$\odot$
FMEA for Risk Management, Resilience and Business Continuity	•••	45	Explore the power of Failure Mode and Effect Analysis (FMEA) in fortifying your organization's risk management, resilience, and business continuity strategies. Dive into the intricacies of the FMEA process, learning how to identify potential failure modes, assess risks, and apply FMEA to enhance various supply chain processes. Gain practical insights into using FMEA as a potent tool for identifying and mitigating supply chain risks, and discover how to integrate it seamlessly into an overarching supply chain risk management plan.	$\otimes$	$\otimes$	$\odot$	$\odot$	$\otimes$

Topic	Level	Minutes	Description	Course	Skill Builder	Microlearning	Memory Jogger	Workplace Assessment	Exam
Introduction to Supply Chain Planning	• 0 0 0	110	Gain an understanding of what supply chain planning is and explore the Sales & Operations Planning (S&OP) process. Gain insights into how to create a demand plan using forecasting techniques, understand capacity requirements, develop an aggregate plan and monitor performance. Also, learn how S&OP creates competitive advantage as well as strategies to improve financial reporting processes.	$\otimes$	$\otimes$		<b>⊘</b>		$\otimes$
Sales & Operations Planning (S&OP)	•••	85	Explore the sales and operations planning (S&OP) process, including S&OP objectives, context, and methodology. Additionally, learn to develop effective strategies for aligning sales goals with operational performance and learn how to effectively manage monthly S&OP processes to optimize inventory levels, production schedules, resource allocation decisions, and customer service.	$\otimes$	$\otimes$		$\odot$		
Master Scheduling	••••	65	Deep dive into master scheduling and its goals by learning how to create a plan for short-term, mid-term, and long-term operations that meets the strategic objectives of the organization. In addition, explore accurate forecasting models, learn how to conduct capacity analysis, and demand trends and how to incorporate quality control systems into the production process.	$\otimes$			$\otimes$		
Master Scheduling Process: An Introduction to the Role of the Master Planner	••••	45	Gain an understanding of the master scheduling process and the role of the Master Planner, including capacity planning, demand forecasting, resource allocation, inventory management, production scheduling and lead time management. Also, gain a deep understanding of how all these elements interact to create an effective supply chain plan.	⊗			$\odot$		
Material Requirements Planning (MRP)	••••	320	Learn about the concept of Material Requirements Planning (MRP) and explore the context and objectives of MRP, the MRP process, and the role of the planner. In addition, learn how to effectively plan for materials needed in a timely manner and develop strategies on how to maintain an efficient inventory control system.	$\otimes$	$\otimes$		⊗	$\bigcirc$

Demand Driven Material Requirements Planning (DDMRP)	•••0	35	Learn how DDMRP works, what it offers, and why it is so useful. Gain knowledge on how this approach can improve inventory accuracy, reduce lead times, enhance customer service levels, and lower costs associated with maintaining excessive inventories.	$\otimes$		<b>⊘</b>			
Understanding the Fundamentals of DDMRP: How it Works, Benefits & Challenges	•••	30	Learn the fundamentals of DDMRP and how to apply it in your organization. Learn about the six-step implementation process from development to realization, strategies for meeting demand timing requirements, ways to anticipate risk factors in materials flow networks, techniques for forecasting demand accurately, methods for collaboration with customers or suppliers, quality assurance practices within DDMRP systems as well as best practices for getting buy-in from stakeholders and securing their support throughout the transition process.	$\odot$					
DDMRP: Strategic Inventory Positioning	•••	30	Explore DDMRP (Demand Driven Material Requirements Planning) strategic inventory positioning, and learn how to use the latest methods in inventory management and control uncertainty in demand and supply. In addition, learn how to develop a strategic approach to positioning your inventory levels, while also understanding key concepts like supply buffering.	$\otimes$					
Introduction to Capacity Planning	•••	65	Deep dive into the fundamentals of capacity planning, including determining capacity requirements, identifying constraints, technical capacity calculation and maximizing capacity utilization. In addition, learn how to make precise calculations for your systems' theoretical and actual capacities.	⊗	$\otimes$		$\otimes$	$\bigcirc$	
Creating Business Value with S&OP	•••	70	Gain an understanding of the principles and strategies behind creating business value using Sales & Operations Planning (S&OP). Learn how to design, implement, and sustain an effective S&OP process, including aligning supply and demand, resolving conflicts, setting targets for inventory management, forecasting financial performance, managing risk exposure while driving profits, and building sales plans and communication models.	$\otimes$	$\otimes$	$\otimes$	$\otimes$

Distribution Requirements Planning (DRP)	•••	65	Deep dive into Distribution Requirement Planning (DRP), a system used to allocate inventory to distribution centers. Explore both strategic and operational planning considerations, such as the units of time to plan, aggregate versus detailed plans, and use demand data for allocation decisions. In addition, learn how DRP can be implemented in your organization for better inventory management practice.	$\otimes$	$\otimes$		<b>⊘</b>		
Distribution Requirements Planning: Types of Planning	•••	45	Explore the context of distribution planning, including the strategic, operational, and other types of planning. Analyze different units of time for planning purposes and explore how to plan in an aggregate or detailed manner. Also, learn about the importance of planning for short-term and long-term goals, as well as develop skills that can be used to help achieve those objectives.	⊗			<b>⊘</b>		
S&OP Financial Trade-offs and What-If Analysis	•••	55	Gain the knowledge and skills to manage risk in Sales & Operations Planning (S&OP) using decision modeling. In addition, learn how to use a what-if analysis approach to quantify potential outcomes from S&OP decisions, so that you can make data-driven decisions which optimize profits.	$\odot$	$\otimes$		<b>⊘</b>		
Product Lifecycle Management	•••	55	Gain an understanding of Product Lifecycle Management (PLM), including balancing supply with demand, assessing and mitigating supply plan risk, managing supply constraints, and allocating limited resources. In addition, explore various methods to help you gain an understanding of the principles behind effective PLM strategy.	$\otimes$	$\otimes$		$\Diamond$		
Master Data, PFEP & Engineering Change	•••	45	Deep dive into the essential concepts of Master Data, Plan For Every Part (PFEP) and Engineering Change. By learning these important elements impact the integrity of your MRP (Materials Requirement Planning), gain insight into how data control affects supply planning. See how to attain a PFEP process and understand how a simple procedure is essential to minimize master data problems.	$\otimes$			$\odot$

Topic	Level	Minutes	Description	Course	Skill Builder	Microlearning	Memory Jogger	Workplace Assessment	Exam
Transportation Carriers	• • • •	95	Explore the various aspects of transportation carriers and how they are used in shipping goods, including different modes of transport, such as trucking, rail and air cargo, as well as intermodal and multimodal options for transporting goods over long distances. Also, learn about freight containers, packaging materials and other considerations for successful international shipping.	$\otimes$			$\odot$	<b>⊘</b>	$\Diamond$
Logistics Service Providers	• 0 0 0	105	Explore the four types of logistics service providers (1PL, 2PL, 3PL, and 4PL), and learn how each type can be used to effectively manage supply chains. Additionally, learn about 1st party logistics (1PL), which is simply the organization's transportation infrastructure; 2nd party logistics (2PL), outsourced warehousing services; 3rd party logistics (3PL) services such as freight forwarding, transport organizations and customs brokers handling international shipments; and finally 4th party logistics (4PL) providing a comprehensive suite of integrated supply chain solutions.	⊗	$\odot$		<b>⊘</b>	<b>⊘</b>	
Introduction to Bill of Lading	• 0 0 0	45	Discover the essential functions of a bill of lading as a legal contract between shipper and carrier. Examine how it outlines shipment details, encompassing the shipper, consignee, carrier, commodity, origin, destination, and terms of carriage. Learn how the bill of lading serves as both a receipt for goods and a document of title.	$\otimes$	$\otimes$		$\bigcirc$	$\otimes$	
Documents for Domestic Transportation	••••	110	Gain an understanding of the documents used in domestic transportation and gain information on the function of a bill of lading and the different types available, including other related documents such as waybills, manifests, delivery instructions, commonly used in such operations.	$\otimes$			$\bigcirc$	$\Diamond$	$\otimes$
North America Import-Export Documents	•••	155	Gain an understanding of international import and export documents used in North America, including information on preparing bills of lading and waybills, invoices, certifications, declarations, and letters of credit. In addition, learn the fundamentals of each document format along with the regulatory requirements for completing them correctly.	$\otimes$	$\otimes$		$\odot$	$\otimes$	$\otimes$

EU Import-Export Documents	••••	105	Learn how to prepare and manage EU import-export documents. In addition, gain an understanding of the importance of these documents from the perspective of international trade, including European international bills of lading, waybills and invoices, certifications, declarations and letters of credit will be covered in detail.	$\otimes$	$\otimes$		<b>⊘</b>	$\odot$	
Logistics technologies: Point of Sale Barcodes	••••	105	Learn about point-of-sale bar codes, Bar codes in production lots and inventory management, and Logistics bar codes, including UPC and E-A-N bar codes, 128 bar codes, ASN and SSCC. With RFID, learn how the technology works, its types, advantages and problems.	$\otimes$	$\otimes$		$\bigcirc$	$\odot$	$\otimes$
Logistics Technologies: Electronic Data Interchange	••••	95	Deep dive into the complexities of Electronic Data Interchange (EDI), including terminology, and skills required, and guides how to implement EDI or change and upgrade current systems.	$\otimes$			$\odot$	$\odot$	$\otimes$
Network Design Principles	•••	135	Explore principles of network design as they relate to multi-echelon supply chain modeling by learning how to make trade-offs when designing a network, and how to build an optimal distribution network. In addition, discover various advanced topics related to the field such as optimization techniques, demand forecasting and facility location models.	⊗	⊗	$\otimes$	$\otimes$	$\bigcirc$	
Network Design Principles: Network Optimization	•••	95	Gain an understanding of the principles of network optimization and analyze how different supply chains interact. Learn about modeling multi-echelon supply chains, trade-offs in network design, and building an optimal distribution network. Also, explore how to develop models that demonstrate the interrelationships between inventory levels at stock points within a logistics system as well as optimize their networks for performance with minimal cost.	$\otimes$			$\odot$	$\otimes$	$\odot$

Reverse Logistics	•••	95	Deep dive into reverse logistics and its importance in the food and pharmacy industry by exploring both the fundamentals of planning and executing transportation as well as best practices for optimal efficiency. In addition, learn how to identify issues with current transportation methods and develop strategies that improve overall operations.	⊗			$\otimes$	$\otimes$	$\otimes$
Logistics Metrics	••••	115	Explore the purpose of logistics metrics, the SCOR metrics framework, and how to measure supply chain reliability, responsiveness, and cost. In addition, learn how to apply the learning through a real scenario in which the company is performing well on current metrics, but profits are still falling due in part to logistical issues.	$\otimes$	$\odot$	$\odot$	$\otimes$	$\otimes$	$\otimes$
Warranties & Customer Care	•••	105	Discover how to determine which types of warranties (e.g. financial compensation vs. repair) are appropriate in which situations and explore how warranties can be used to gain competitive advantage, details the warranty management process and provides warranty management metrics.	$\otimes$	$\otimes$		$\otimes$	$\otimes$	$\odot$
Cold Chain Management	•••	115	Learn what cold chain is as well as its importance and where it is used.  Explore methods of dispatching cold chain products and also methods for the receipt of cold chain products, including best practice procedures for cold chains.	$\otimes$	$\odot$		$\otimes$	$\odot$	$\otimes$
Blockchain - Preventing Counterfeiting	•••	95	Gain an understanding of blockchain technology and how it can be used to prevent counterfeiting. Explore why this is the most secure form of supply chain management available and learn about the different components of blockchain, such as encryption and hash functions, that make it so secure.	$\odot$			$\otimes$	$\odot$	$\otimes$
Cargo Insurance: Protecting your Shipments	•••	55	Cargo insurance is a critical aspect of international trade, safeguarding the interests of shippers and customers against the many risks that can occur during the transportation of goods. From the ancient sea merchants who sought to protect their goods against the perils of the sea, to the modern supply chain professionals mitigating the risks of global logistics, cargo insurance has played a pivotal role in facilitating commerce and trade.	⊗	⊗		<b>⊘</b>	$\odot$

Freight Forwarding	• 0 0 0	55	This course is designed for you.  Daniel, a Freight Forwarder, is tasked with moving shipments across the globe. Daniel often struggles balancing costs, meeting tight deadlines, and ensuring all regulations are followed without delays.	$\odot$	$\otimes$		$\otimes$	$\otimes$	
Dangerous Goods Transportation	•••	55	By the end of this course, you will be able to: Recognize key global DG regulations and when they apply. Classify dangerous goods using UN numbers, hazard classes, and packing groups. Select the correct packaging, marking, and labeling to meet compliance. Prepare required documentation for different transport modes. Ensure safe loading, securing, and handling of DG shipments. Check vehicle and equipment requirements for DG transport. Respond effectively to DG transport risks and emergencies. Understand how technology and a DGSA help ensure compliance.	$\otimes$	$\otimes$		$\otimes$	$\otimes$	
Advanced Supply Chain Network Design and Optimization	•••	55	This course explores advanced strategies for building supply chains that are cost-efficient, resilient, and adaptable. Learn how to apply mathematical modeling techniques like linear programming, stochastic modeling, and Al-based heuristics. Understand how to design flexible facility networks, optimize inventory across multiple tiers, and use simulation tools like Monte Carlo for scenario planning. The course also covers nearshoring, reshoring, warehouse automation, and how to integrate financial tools such as Supply Chain Finance (SCF) and Cost-to-Serve (CTS) analysis into network design.	$\otimes$	$\otimes$		$\otimes$	$\otimes$

Topic	Level	Minutes	Description	Course	Skill Builder	Microlearning	Memory Jogger	Workplace Assessment	Exam
Introduction to Warehousing	• 0 0 0	105	Explore the concept of warehousing and its importance in business operations, including different types of warehouses, why we need warehouses and how warehousing can affect profits. Also, learn practical skills such as storage techniques, inventory control management and material handling processes for effective warehouse operation.	$\otimes$	$\odot$	$\odot$	<b>⊘</b>	$\otimes$	
Warehouse Safety	• 0 0 0	55	Learn to identify all the important health and safety risks in warehouses, and how to prevent them, including health and safety on docks, forklifts, conveyors, storage, ergonomics, recharging stations, chemical spills, and accident prevention. It is based on OSHA (Occupational Safety and Health Administration in the United States) standards and EU-OSHA (the EU equivalent).	$\odot$	$\odot$		$\otimes$		
Warehouse Operations	•••	75	Discover the skills you need to have to run a successful warehouse operation, including receiving, putaway, order picking, packing, loading and shipping. In addition, learn how to manage inventory levels and optimize your workflow for maximum efficiency.	$\otimes$	$\bigcirc$		$\bigcirc$		
The Importance of Warehouse Operations	• 0 0 0	55	Discover the importance of warehouse operations and how seemingly small errors in this domain can significantly impact customer satisfaction, business growth and profitability. In addition, learn about inventory management, order fulfillment processes, shipping accuracy, and safety protocols for handling delicate items.	$\odot$	$\otimes$		$\Diamond$		
Warehouse Design	••••	105	Explore the key principles of designing an efficient warehouse and learn how to determine the size of your warehouse should be, how to determine where to locate your warehouse, planning the layout of a warehouse and how to use warehouse space.	$\otimes$	$\bigcirc$		$\otimes$		$\odot$
Lean Warehousing: Eliminating Waste	••••	325	Learn how to organize the warehouse optimally and reduce any waste of resources or time. In addition, learn strategies for organizing items according to their purpose and importance so that they can be easily located when needed, as well as ways to streamline processes such as inventory tracking.	$\otimes$	$\otimes$		$\otimes$	$\otimes$	$\odot$

Торіс	Level	Minutes	Description	Course	Skill Builder	Microlearning	Memory Jogger	Workplace Assessment	Ехат
Introduction to the SCOR model	• 0 0 0	55	Deep dive into the Supply Chain Operations Reference (SCOR) model and explore what SCOR is and how it can be applied in practice to improve your organization's supply chain practices, including customer service, supply chain management, order fulfillment, and inventory management.	$\odot$	$\odot$		$\bigcirc$		
Supply Chain Dynamics: Defining the Bullwhip effect	••••	105	Deep dive into the causes and effects of the Bullwhip Effect in Supply Chain Dynamics. In addition, gain a deeper understanding of how the bullwhip effect can cause higher costs and lost revenue in your supply chain, including what movements, delays and amplifications exist within the system, why they happen and how to recognize them in your own supply chain.	$\otimes$	$\otimes$		$\otimes$	$\otimes$	$\odot$
Supply Chain Dynamics: Causes of the Bullwhip effect	•••	100	Explore the economics of demand uncertainty and how it drives supply chain dynamics. Learn about various causes that lead to a bullwhip effect such as order batching, price fluctuations and customer behavior.	$\otimes$		$\odot$	$\otimes$	$\otimes$	$\otimes$
Supply Chain Dynamics: Preventing the Bullwhip effect	•••	120	Explore the concrete steps that your organization needs to follow to eliminate the Bullwhip effect. Take the lead within your supply chain to eliminate stockouts and get inventory under control.	$\otimes$	$\otimes$	$\otimes$	$\otimes$	$\otimes$	$\odot$
Supply Chain Strategy: Key Capabilities	••••	55	Gain an understanding of the supply chain strategy and the key capabilities needed to develop a competitive business plan. Learn about different types of strategic toolkits as well as supply chain capabilities that optimize performance, such as supplier relationship management, logistics & transportation optimization, inventory and tracking systems, and product development for global markets.	$\otimes$	$\otimes$		$\otimes$		
Supply Chain Strategy: Key Decisions	••••	295	Learn the key decisions related to supply chain strategy. In addition, learn how to determine whether to make or buy a product or component, what type of supplier relationships you need, and which operating model is best for each product. Also, explore network design strategies, reverse logistics opportunities, and planning intricacies that can be used for strategic advantage.	⊗	⊗		<b>⊘</b>	$\otimes$

Vision, Mission and Strategy	•••	50	Explore the differences between a Vision and Mission, how strategy contributes to achieving them, and how to create an effective strategy. In addition, learn how to define each term in their own words; recognize the importance of understanding what each is individually and collectively; determine which aspects influence the others; explain the different types of strategies available for implementation; describe the process by which they can develop an appropriate one that leads directly towards success; discuss potential advantages and disadvantages associated with using specific approaches.	$\otimes$		$\otimes$	$\otimes$		
Design for Supply Chain	••••	55	Gain an understanding of designing products to reduce supply chain risks and transportation costs. In addition, deep dive into product design, inventory management strategies, selecting vendors and suppliers, communication methods, and data analysis techniques. Learn how to assess your current operations and develop plans for achieving strategic objectives such as reducing operational costs or increasing efficiency.	$\otimes$	$\otimes$		$\otimes$		
Supply Chain Performance Metrics	••••	45	Explore the dynamic intersection of demand and supply within the realm of supply chain management with our comprehensive course on Demand and Supply Planning Metrics. This course is designed to equip you with the essential knowledge and skills needed to optimize and synchronize the intricate processes of forecasting, demand planning, and supply chain operations.	$\otimes$	$\otimes$	$\otimes$	$\otimes$	$\otimes$	
SCOR-DS for Supply Chain Optimization	••••	45	Discover the untapped capabilities of your supply chain with SCOR DS (Supply Chain Operations Reference for Design and Source processes). Harness the full potential of the SCOR framework's Design and Source processes for optimal efficiency, resilience, and strategic alignment within your organization.	⊗	$\otimes$	$\otimes$	$\otimes$	$\bigcirc$	
Turning Strategy Into Action	•••	45	Discover Hoshin Kanri, a method of strategic planning which has been successfully used by organizations in Japan and around the world. Learn how to engage your workforce in the process, so they understand and believe in your organization's direction, as well as provide practical advice for creating an effective action plan that focuses on results.	$\otimes$			$\otimes$

Topic	Level	Minutes	Description	Course	Skill Builder	Microlearning	Memory Jogger	Workplace Assessment	Exam
Climate Essentials: Understanding and Mitigating Climate Change	• 0 0 0	55	Climate change affects all aspects of our lives, including procurement and supply chain management. Professionals today must navigate its impacts. Understanding the science behind climate change and mitigating its effects is crucial to the planet, the people and your company's profits.	$\otimes$	$\odot$		$\otimes$	$\odot$	
Implementing a Sustainable Supply Chain Strategy: A Step-by-Step Guide	••••	50	Deep dive into the step-by-step guide for implementing a sustainable supply chain strategy. Learn how to ensure your business meets the highest ethical standards, including reducing environmental impact, respecting human rights and labor standards, and ensuring health and safety.	$\otimes$	$\otimes$	$\otimes$	$\otimes$		
Implementing a Sustainable Supply Chain Strategy: Practical Supplier Evaluation	••••	55	Learn how to conduct supplier evaluations, use questionnaires and site visits, and when to make use of third-party audits. Additionally, discover how you can help suppliers improve while limiting risk for yourself by exploring examples of successful strategies in action.	$\otimes$	$\odot$		$\otimes$		
Sustainable Logistics	••••	285	Learn what sustainable logistics means as well as what a carbon footprint is and what areas are affected by sustainable logistics. In addition, explore the benefits of sustainable logistics as well as how to make improvements through sustainable logistics.	$\otimes$			$\otimes$	$\otimes$	
Introduction to the Corporate Sustainability Reporting Directive	•••	55	The Corporate Sustainability Reporting Directive, CSRD, is a wide-ranging law, created by the European Union (EU), which has major implications for many companies worldwide.  The EU created a new law to accelerate the adoption of sustainability actions. Research showed that only 33% of companies were beginning to adopt the necessary changes to reduce the negative impact that organizations are having on their environment.  CSRD will drive some of the biggest changes for decades in how companies operate. Some may see it as an additional administrative burden, but others will recognize the opportunity to redesign their supply chains, reduce environmental damage, and thrive in a challenging but exciting business environment.	$\otimes$	$\otimes$		$\otimes$	$\otimes$

### **Supply Chain Academy**

SUPPLY CHAIN

ACADEMY

The Supply Chain Academy delivers practical, role-specific training to help teams develop the skills and confidence needed to manage global supply chains effectively. Our expert-led courses are designed around real-world challenges, equipping professionals with the knowledge to optimize operations, improve efficiency, and build resilience across every stage of the supply chain. By focusing on targeted, actionable learning, we enable organizations to strengthen performance, drive long-term growth, and successfully navigate today's complex and rapidly evolving supply chain landscape.

### **Other Skill Dynamics Academies:**

### TRADE COMPLIANCE

The Trade Compliance Academy delivers expert, role-based eLearning on global trade regulations, helping organizations reduce risk, ensure compliance, and build lasting capability.

The Procurement Academy supports capability growth in procurement teams tailored to individual roles and experience levels for maximum impact.

# The New Reality of Procurement

### Today, more than ever, procurement and supply chain teams face acute longterm challenges:

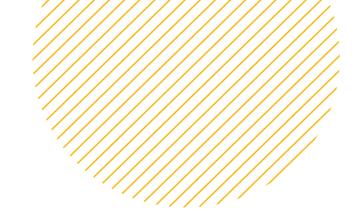

- · Geopolitical fragmentation driven by ongoing conflicts, shifting alliances, and trade barriers
- Pressure to engage and retain talent amid hybrid work, automation, and upskilling needs
- Relentless cost pressures intensified by inflation, nearshoring, and operational inefficiencies
- Innovation pressure to integrate AI, data analytics, and automation fast
- Increasing governance complexity with expanding regulations on ESG, trade, and cybersecurity

### These challenges are compounded by everyday supply chain realities:

- Declining morale as teams face constant disruption and escalating expectations
- · Unexpected shocks, from cyberattacks to climate-driven events, demanding rapid resilience
- Ongoing shortages of critical materials and components
- Margin pressure from rising costs and supplier instability

It's no surprise procurement and supply chain professionals are under immense strain. With the changing demands of their roles, teams must be regularly trained and developed simply to be equipped to do their job effectively.

## Continuous, Personalized, Digital Learning

The only way to effectively assess and upskill teams at scale is through continuous, personalized, digital learning. Thanks to our unique blend of training courses, market-leading platform, and learning science your procurement, supply chain and trade compliance teams will be equipped with the skills they need to excel in their roles.

### Why Skill Dynamics?

520+

Multinational clients

320,000+

Learners around the world

100

Countries

### **The Results**

Our eLearning will accelerate your performance by helping you to:

- Attract and retain talent
- Future-proof your capabilities and strengthen the impact of your L&D investment.

## Our Complete Learning Library

With over 2000 pieces of supply chain, procurement and trade compliance content across multiple dynamic and engaging learning formats, we're confident we have the broadest and deepest digital learning catalog in the industry.

### Interactive Formats That Make Learning Memorable

There are various formats of content that have been designed based on learning science, ensuring knowledge is retained and applied on-the-job.

High impact eLearning

Simulations

Application based tasks

### Our Current **Learning Formats**

**High-impact** e-learning

Practical, scenario-based learning ranging from 10 to 40 minutes. Unique to the market as our e-learning uses cognitive load theory to maximize retention and works to make complex High-impact e-learning concepts accessible.

**Expert review** 

An expert presents a scenario with a problem to be solved. Learner types out solution and compares with expert response.

Microlearning

Short videos where an expert summarizes and refreshes key concepts learned previously.

Skill builder

Test the learner's understanding by putting the learner in real-life scenarios and posing a set of questions.

Refresher courses

Summaries of eLearning courses taken previously – battles the forgetting curve.

**Exams/assessments** 

Exams/assessments for each competence designed to measure the learner's skill level in that competence.

**Memory jogger** 

Summary of eLearning courses in PDF format.

**Application-based** tasks and activities

'On the job' projects that ask the learner to implement what they have learned. Activities are shorter versions of this, such as speaking to a colleague or a simple task.

Ask the expert

An interactive modality resembling an FAQ, offering learners supplementary insights and detailed explanations on topics covered within the course.

#### **Procurement Academy**

The Procurement Academy provides tailored training programs designed to support capability growth across procurement teams at every level of experience. Our role-specific approach ensures each professional gains the skills and confidence needed to deliver maximum impact, whether managing suppliers, driving cost savings, or supporting strategic business goals. By combining expert-led content with practical, real-world scenarios, we help organizations strengthen procurement performance, improve decision-making, and build long-term value, empowering teams to navigate today's complex and rapidly evolving procurement landscape with confidence.

#### Other Skill Dynamics Academies:

#### BY CONTENT ENABLERS TRADE COMPLIANCE

The Trade Compliance Academy delivers expert, role-based eLearning on global trade regulations, helping organizations reduce risk, ensure compliance, and build lasting capability.

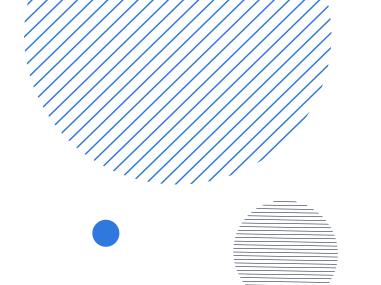

The Supply Chain Academy delivers practical, role-specific training, helping teams build the skills needed to manage global supply chains effectively.

## The New Reality of Trade Compliance

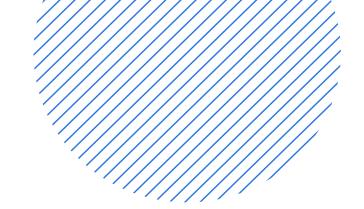

#### Today, more than ever, trade compliance teams are navigating complex, high-stakes challenges that show no signs of slowing:

- Geopolitical fragmentation is reshaping global trade routes, regulations, and enforcement priorities
- Heightened regulatory scrutiny and rapidly evolving export controls, sanctions, and ESG requirements
- Digital transformation and Al adoption creating new risks, data security concerns, and compliance gaps
- Growing pressure to reduce risk exposure while supporting business agility and speed to market
- Talent challenges, as compliance roles demand deeper expertise, judgment, and crossfunctional collaboration

#### These challenges are intensified by everyday realities:

- Frequent regulatory updates and enforcement shifts that require constant vigilance
- Unexpected events, from sanctions rollouts to cyber incidents. Requiring fast, informed response
- Global supply chain instability that tests compliance processes under pressure
- Morale strain as teams juggle high workloads, limited resources, and rising expectations

It's no surprise that trade compliance professionals are feeling the pressure. As the landscape grows more complex, organizations must invest in regular, role-specific training to keep their teams skilled, confident, and prepared to manage risk effectively.

## Continuous, Personalized, Digital Learning

The only way to effectively assess and upskill teams at scale is through continuous, personalized, digital learning. Thanks to our unique blend of training courses, market-leading platform, and learning science your trade compliance, procurement and supply chain teams will be equipped with the skills they need to excel in their roles.

#### **Personalized Learning Aligned with Your Policies**

Customers can have their Trade Compliance Academy content fully personalized to reflect their company's policies and procedures, ensuring training is directly aligned with the way they work. This customization makes learning highly specific and relevant, combining internal processes with industry best practices and the latest regulatory requirements. The result is a program that equips employees with practical, actionable knowledge they can immediately apply on the job.

#### Why Skill Dynamics?

520+

Multinational clients

320,000+

Learners around the world

100

Countries

#### The Results

#### Our eLearning will accelerate your performance by helping you to:

- Attract and retain talent
- Future-proof your capabilities and strengthen the impact of your L&D investment.

## Our Complete Learning Library

With over 2000 pieces of supply chain, procurement and trade compliance content across multiple dynamic and engaging learning formats, we're confident we have the broadest and deepest digital learning catalog in the industry.

#### Interactive Formats That Make Learning Memorable

There are various formats of content that have been designed based on learning science, ensuring knowledge is retained and applied on-the-job.

## Our Current Learning Formats

High-impact e-learning	Practical, scenario-based learning ranging from 10 to 40 minutes. Unique to the market as our e-learning uses cognitive load theory to maximize retention and works to make complex High-impact e-learning concepts accessible.
Expert review	An expert presents a scenario with a problem to be solved. Learner types out solution and compares with expert response.
Microlearning	Short videos where an expert summarizes and refreshes key concepts learned previously.
Skill builder	Test the learner's understanding by putting the learner in real-life scenarios and posing a set of questions.
Refresher courses	Summaries of eLearning courses taken previously – battles the forgetting curve.
Exams/assessments	Exams/assessments for each competence designed to measure the learner's skill level in that competence.
Memory jogger	Summary of eLearning courses in PDF format.
Application-based tasks and activities	'On the job' projects that ask the learner to implement what they have learned. Activities are shorter versions of this, such as speaking to a colleague or a simple task.
Ask the expert	An interactive modality resembling an FAQ, offering learners supplementary insights and detailed explanations on topics covered within the course.

Foreign Corrupt Practices Act (FCPA)	Anti- Corruption	FCPA	•••	38	The CE FCPA course provides users with a basic understanding of the primary U.S. laws against bribing foreign government officials and how different U.S. agencies have enforcement responsibility. Employees will learn about the origins, provisions, applications, and penalties associated with the FCPA, as well as additional relevant legislation, including U.S. securities regulations, the Dodd-Frank whistleblower provisions, and the anti-corruption legislation of other countries. The course also discusses certain types of foreign laws that may apply to transactions in international trade.	$\odot$		$\oslash$	$\Diamond$	
The UK Bribery Act 2010	Anti- Corruption	The UK Bribery Act 2010	••••	32	This course is designed to help users subject to the jurisdiction of the UK understand their personal and corporate responsibilities under the Bribery Act 2010. The training includes an overview of the act, situations considered bribery that are prohibited by the act, penalties, and a discussion of the six principles that constitute "adequate procedures" that companies can take to minimize the risk of bribery taking place.	$\odot$		$\odot$	$\odot$

U.S. Export Authorizations for Non-U.S. Practitioners	Export Authorizations - U.S.	U.S. ITAR and U.S. EAR	• • • •	150	This practitioner-level course examines the authorization types available for reexports of U.Sregulated hardware, technical information, software, and services received via direct commercial sales. Additionally, this course covers authorization requirements for deemed reexports to dual and third-country nationals, as well as employing U.S. persons at non-U.S. organizations. This course also addresses available authorizations for the temporary return of items to the United States for repair or servicing. The course provides an overview of these areas in relation to the relevant U.S. compliance regimes, including the Export Administration Regulations and the International Traffic in Arms Regulations.  The training provides detailed guidance for implementing the appropriate authorization for transactions that may involve multiple authorization types, as well as identifying when authorizations need to be amended and the process for obtaining these amendments. This course will present information, analysis, and commentary that address issues of particular relevance to compliance practitioners outside the U.S.  The content in this course aligns with the Tier 4 requirements outlined in Element 5 of the DDTC ITAR Compliance Program Guidelines.	⊗	$\otimes$	$\odot$	$\odot$

U.S. Export Authorizations for U.S. Practitioners	Export Authorizations- U.S.	U.S. ITAR and U.S. EAR	•••	540	This export practitioner-level course examines the authorization types available for exports and imports of regulated hardware, technical information, software, and services under both direct commercial sales and Foreign Military Sales programs. This course also addresses the permanent and temporary nature of transactions. The course provides an overview of these areas in relation to the relevant U.S. compliance regimes, including the Export Administration Regulations (EAR), the International Traffic in Arms Regulations (ITAR), and Office of Foreign Assets Control (OFAC)-administered sanctions and embargoes.  The training provides detailed guidance for implementing the appropriate authorization for transactions that may involve multiple authorization types, as well as different regulations, depending on the activity. This course also discusses which business functions may have the relevant information required to determine authorization needs, such as program management, contracts, business development, procurement, and logistics.  The content in this course, designed for members of your export compliance team, aligns with the Tier 4 requirements outlined in Element 5 of the DDTC ITAR Compliance Program Guidelines.  Users will receive a Certificate of Completion from the Schar School of Policy and Government at George Mason University upon successfully finishing this course.	$\otimes$	$\odot$	$\otimes$	$\odot$	$\otimes$

U.S. Export Clearance for U.S. Practitioners	Export Clearance – U.S.	U.S. ITAR and U.S. EAR	•••	150	This export practitioner-level course introduces learners to the regulatory requirements for effecting the actual shipment or transfer of export-controlled items. These activities are commonly called "customs clearance." This course provides an overview of these areas in relation to the relevant U.S. compliance regimes, including the Export Administration Regulations (EAR), the International Traffic in Arms Regulations (ITAR), the Foreign Trade Regulations (FTR), and Customs and Border Protection (CBP) regulations.  These activities include preparation of customs clearance documentation, decrementation of authorizations, and recordkeeping. Specifically, this course will identify the different requirements for hardware and technical information under the ITAR and the EAR, as well as the submission methods to CBP. This course will also discuss the different requirements for permanent transactions and temporary transactions. Transactions involving hand-carry scenarios, self-decrementation, domestic transactions with foreign persons, and shipments using government transport will also be discussed. Most importantly, this course discusses best practices for conducting customs activities.  The content in this course, designed for members of your export compliance team, aligns with the Tier 4 requirements outlined in Element 5 of the DDTC ITAR Compliance Program Guidelines.  Users will receive a Certificate of Completion from the Schar School of Policy and Government at George Mason University upon successfully finishing this course.	$\odot$	$\odot$	$\otimes$	$\otimes$	$\otimes$

Advanced Export Compliance for U.S. Employees: Defense Controls	Export Controls - U.S.	U.S. ITAR		90	This course is tailored specifically to individuals at organizations with ITAR-controlled products, services, or technologies that perform maintenance, servicing, installation, and integration, and advise on the use of that export-controlled hardware, data, and/or software. The training includes:  • Function-specific introductions that outline the activities that give rise to the compliance risks encountered by these employees; • Advanced-level training on key regulatory definitions, end-use and end-user considerations, the U.S. export jurisdiction and classification process, export authorizations under the ITAR and the EAR, and other topics relevant to the aftermarket support and program management functions; and • A series of role-based scenarios that illustrate how these compliance concepts apply to their day-to-day work activities. These include troubleshooting by phone, quality assurance visits to customers, returning products for testing and repair, hand carrying parts, and more.  The content in this course aligns with the Tier 3 requirements outlined in Element 5 of the DDTC ITAR Compliance Program Guidelines and can be supplemented with the organization-specific content recommended in the guidelines, including:  • An overview of an organization's ITAR Compliance Program,  • Red flags specific to an organization's business,  • Organization-specific risk profiles and high-risk compliance areas,  • An organization's trade compliance processes,  • Organization charts and contact information for key export compliance personnel, and  • Training on specific USML/CCL categories.	$\otimes$	$\odot$	$\odot$	$\odot$

Advanced U.S. Export Compliance for Empowered Officials	Export Controls - U.S.	U.S. ITAR	••••	160	The traditional idea of an empowered official is the individual who signs applications and is knowledgeable about the different U.S. export control regimes and regulations. However, beyond the daily requirements of an empowered official, there are actions that are not directly covered by the regulations, such as making the case for trade compliance resources, stakeholder engagement, and managing external audits. This course explores those topics and others that are frequently conducted by or led by empowered officials.	$\odot$	$\odot$	$\odot$	$\bigcirc$	$\Diamond$
An Overview of U.S. Military and Military- Intelligence End- Use and End-User Controls	Export Controls - U.S.	U.S. EAR	•••	16	This short awareness-level training course introduces learners to the concepts and definitions behind U.S. controls on military and military-intelligence end use and end users under the Export Administration Regulations (EAR).	$\odot$			<b>⊘</b>	
Export Compliance Overview: Leadership	Export Controls - U.S.	U.S. ITAR and U.S. EAR	•••	60	This awareness-level Trade Compliance Overview: Leadership course communicates how executive leaders need to view export, import, corruption, and sanctions and embargoes training as an integrated program to mitigate corporate risk. It discusses key trade concepts relevant to typical business transactions and helps senior leaders understand the critical role they play in promoting and ensuring an effective trade compliance program and culture – essential ingredients for the long-term success of any company. U.S. and non-U.S. executives, vice presidents, senior managers, and directors will examine these key questions as they relate to trade compliance and their role within their organization:  Who are you doing business with?  How is your transaction being conducted?	$\otimes$		$\otimes$	$\odot$

Foundations of U.S. Export Compliance for U.S. Practitioners	Export Controls - U.S.	U.S. ITAR and U.S. EAR	•••	240	This export practitioner awareness course introduces learners to the six primary areas of U.S. trade compliance that they may be involved in: jurisdiction and classification, regulated activities, authorizations, authorization management, export clearance, and trade compliance programs. The course provides an overview of these areas in relation to the relevant U.S. compliance regimes, including the Export Administration Regulations (EAR), the International Traffic in Arms Regulations (ITAR), and Office of Foreign Assets Control (OFAC)-administered sanctions and embargoes.  The content in this course, designed for members of your export compliance team, aligns with the Tier 4 requirements outlined in Element 5 of the DDTC ITAR Compliance Program Guidelines.  The training identifies key activities and definitions within the trade compliance environment to foster understanding of the learner's role in trade compliance.  Users will receive a Certificate of Completion from the Schar School of Policy and Government at George Mason University upon successfully finishing this course.	$\odot$	$\odot$	$\odot$	$\odot$	$\odot$

U.S. Export Compliance for Non- U.S. Practitioners	Export Controls - U.S.	U.S. ITAR and U.S. EAR	•••	90	This practitioner-level course introduces learners to the regulatory requirements for effectively managing compliance with U.S. export controls from a non-U.S. perspective. The course provides an overview of these areas in relation to the relevant U.S. compliance regimes – including the Export Administration Regulations and the International Traffic in Arms Regulations – and presents information, analysis, and commentary that address issues of particular relevance to compliance practitioners operating outside the United States.  These activities include the establishment of policies and procedures related to export compliance such as the process for identifying and handling U.Sorigin items, tracking items received or sent temporarily, and screening employees for status under the EAR and the ITAR. The course will identify the recordkeeping requirements for non-U.S. entities, as well as the flow-down of export information to your partners and end users. Additionally, this course discusses what should happen if a violation is suspected and who is responsible for making a disclosure, if necessary. Most importantly, this course discusses best practices for effective compliance by non-U.S. practitioners.  The content in this course aligns with the Tier 4 requirements outlined in Element 5 of the DDTC ITAR Compliance Program Guidelines.	$\otimes$	$\otimes$	$\otimes$	$\odot$

Global Customs Valuation for Import Practitioners	Import/ Customs	Valuation	•••	46	Customs valuation is the process of assigning a monetary value to an imported good for purposes of collecting revenue, protecting tariff concessions, and implementing trade policy. The CE practitioner-level Global Customs Valuation for Import Practitioners course starts with an overview of the acceptable methods for determining customs value as set out by the General Agreement on Tariffs and Trade, then discusses each of those methods in detail. It is non-jurisdictional, designed to be used by practitioners in any country.	$\otimes$		$\odot$	$\otimes$	
Global Import Controls Overview	Import/ Customs		••••	22	This non-jurisdictional collection of microlearning elements provides an awareness of import-related issues, including classification, country of origin, valuation, permitting, and recordkeeping requirements. When incorporated into a corporate learning plan, the collection is designed so that jurisdiction-specific content can be added to provide additional depth and detail to the training.  The course comes as a pack in multiple languages, and the learner has the option of:  Brazilian Portuguese  Canadian French  Danish  Dutch  French  German  Italian  Japanese  Korean  LA Spanish  Polish  Russian  Simplified Mandarin  Vietnamese	$\odot$		$\odot$	$\otimes$

Import Compliance	Import/ Customs		• 0 0 0	10	This is a short, non-jurisdictional introduction to the basics of customs compliance.	$\bigcirc$		$\odot$	$\odot$	
The Customs Trade Partnership Against Terrorism	Import/ Customs	U.S. CTPAT	•••	60	This course introduces users to the U.S. CTPAT program, the voluntary international supply chain security initiative administered by CBP. Key features of the program discussed in the training include the three focus areas of corporate, transportation, and people and physical security; and the minimum security criteria for U.S. importers associated with these focus areas. When incorporated into a corporate learning plan, the course allows for significant personalization with the insertion of a company-specific introduction, conclusion, and supplements discussing a company's specific security requirements as prescribed by CTPAT.	$\bigcirc$				
U.S. Customs Compliance for Practitioners	Import/ Customs	CBP Regulations	•••	105	This practitioner-level course provides users with an in-depth understanding of the rules and rationale behind numerous import-related issues – including classification, valuation, and country of origin – and their roles within the import process. The course includes detailed sections on import valuation; trade and other preferential agreements; duties, fees, and taxes; import clearance; and rules surrounding temporary imports.  The course also comes with a series of function-based scenarios that illustrate the application of these concepts introduced in this training and a full year of access to Content Enablers' COMPLIANCE CONTINUED: Webinar Series for Import Practitioners.	$\odot$		<b>&gt;</b>

U.S. Export Classification for Non-U.S. Practitioners	Jurisdiction and Classification - U.S.	U.S. ITAR and U.S. EAR		90	This practitioner-level training course gives learners outside the U.S. the foundation for conducting and/or validating U.S. jurisdiction and classification assessments of U.Sorigin items by analyzing the critical factors to be considered – which are not always explicit in the regulations – and the methods for conducting such assessments. The factors include the differences between the philosophies of the ITAR and EAR when reviewing items and the application of the specially designed definition, analysis of the pivotal definitions to understand when information is export controlled, guidance on the issue of ITAR contamination of non-U.S. items (commonly referred to as the see-through rule), and tips for reading the control lists. The course also discusses the role effective jurisdiction and classification plays in a company's compliance program, including best practices for documenting the determination process. The course presents information, analysis, and commentary that address issues of particular relevance to compliance practitioners operating outside the United States.  The content in this course aligns with the Tier 4 requirements outlined in Element 5 of the DDTC ITAR Compliance Program Guidelines.	$\odot$	$\odot$	$\odot$	$\odot$
